## Equipment Care Contract

The engineering classes at Dimond High School (*Principles of Engineering, Introduction to Engineering Design, Digital Electronics and Computer Integrated Manufacturing*) involve the use and handling of diverse equipment, tools and materials. Safe operating procedures will be introduced prior to the use of the equipment and safety will be enforced at all times.

The student, parent/guardian acknowledges that there is risk of injury if the student does not follow the safety guidelines and/or procedures. The Instructor, School, and District are not liable for student injuries caused by improper use or handling of equipment and materials, or failure to follow safety guidelines and Instructor procedures.

A current inventory of all the equipment has been created. Students are expected to maintain it and are not held accountable for normal wear and tear. In order for a student to work with the equipment, both the student and a parent/guardian must acknowledge that replacement of any intentionally damaged or lost equipment due to a student's negligence will be the responsibility of the student and/or parent/guardian.
